DATE MAILED: 01/25/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/870,812	Applicant(s) OKAZAKI ET AL.	
	Examiner Tom P Duong	Art Unit 1764	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 November 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 15-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1764

DETAILED ACTION

Applicants' remarks and amendments filed on November 12, 2004 have been carefully considered. Claims 1-14 have been canceled. New claims 15-19 have been added. Claims 15-19 are pending in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 15-17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohru et al. (3,988,423) in view of Sato et al. (4,418,045).
Regarding claim 15, Ohru et al. discloses an apparatus (Fig. 1) for treating of a waste gas (Abstract) containing combustible compounds (Col. 1, lines 9-17) comprising: a catalytic oxidation reactor (15) for the treatment of the waste gas; at least a first pre-heater device (16); a heat recovery device (18) for recovering heat from treated gas emanating from the reactor (Col. 6, lines 6-7). Ohru et al. discloses the waste gas (1) and air containing oxygen (19) are being supply to the heat exchanger (16) but fails to disclose a device for supplying the waste gas and a molecular oxygen-containing gas supplying device to the reactor. Sato teaches a device (booster fan 2) and a molecular oxygen containing as supplying device (air supplying fan 10) for supplying and/or facilitating the transfer of waste gas

Art Unit: 1764

and oxygen to the heat exchanger (16). Thus, it would have been obvious in view of Sato to one having ordinary skill in the art to modify the apparatus of Ohruai with a device for supplying the waste gas and with a device for supplying oxygen-containing gas to the reactor as taught by Sato in order to facilitate the transfer of waste gas and oxygen to heat exchanger. Ohruai also fails to disclose a second pre-heater device for heating the waste gas prior to its entry into the reactor. It would have been obvious in view of Ohruai to one having ordinary skill in the art to duplicate additional waste gas pre-heaters to further preheat the waste gas stream and/or additional waste gas stream. Note, the court held that mere duplication of parts has no patentable significance unless a new and unexpected result is produced. (See *In re Harza*, 274 F.2d 669, 124 USPQ 378 (CCPA 1960)). Likewise, Sato teaches a second waste gas pre-heater (44) is used to further heat the waste gas (from line 34) by the treated waste gas (line 40) emanating from the reactor 36 and the waste gas emanating (via line 37) from reactor (36) to the heat recovering device (38) is used as a heat source. Thus, it would have been obvious in view of Sato to one having ordinary skill in the art to modify the apparatus of Ohruai with a second waste gas pre-heater as taught by Sato in order to provide additional heating means to further preheat the waste gas stream prior feeding to the reactor. Regarding claim 16, Ohruai in view of Sato teaches an oxygen device connected to the waste gas inlet (3) of the first pre-heater device (16) and a bypass oxygen supplied device (via lines 5 and 6) to the downstream of a first pre-heater but fail to disclose an oxygen device further connected to a region of the apparatus between the waste gas outlet of

Art Unit: 1764

the second pre-heater device and the inlet of the reactor (15). However, it would have been obvious that the duplication of a second pre-heater or additional heater(s) installed in series on line 4 immediately after the first pre-heater (16) as described above will provide a configuration with an oxygen containing device between the waste gas outlet of the second preheater device and the inlet of the reactor (15). Regarding claim 17, it is obvious that the duplication of a second pre-heater installed on line 4 immediately after the first pre-heater (16) will have a heat source without being passed through the heat recovery device (18).

Regarding claim 19, it is conventional to provide variable drive fan to supply oxygen to the waste gas system and it would have been obvious to do so here to control the amount of supplied oxygen to the waste gas system.

2. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over the applied references (Ohrui '423 in view of Sato '045) as applied in claim 15, above and further in view of Brewer et al. (4,038,032) and Lamberti et al. (4,101,632). The applied references fail to disclose a temperature measuring means for treated gas emanating from said first waste gas pre-heater and a molecular oxygen-containing gas flow controller to adjust the amount of oxygen supplied to the waste gas outlet and waste gas inlet of the reactor. Brewer teaches a control system (Figure and Col. 4, lines 24-62) for treating waste gas with temperature measuring means (13) with feedback signal to the temperature controller (16) to regulate the amount of oxygen-containing gas (air, col. 4, lines 8-11) to the waste gas incinerator unit 1 (reactor). Thus, it would have been

Art Unit: 1764

obvious in view of Brewer to one having ordinary skill in the art to modify the apparatus of the applied references with temperature measuring means as taught by Brewer in order to provide proper amount of oxygen-containing gas (air) to the reactor. Likewise, Lamberti also teaches temperature-measuring means (8) which controls the temperature in the combustion chamber (reactor) (Col. 3, lines 60-65) and oxygen controller 22 to control the waste gas outlet (exhaust gas) to obtain a stack with free oxygen (Col. 4, lines 27-54). Thus, it would have been obvious in view of Lamberti to one having ordinary skill in the art to modify the apparatus of the applied reference with temperature measuring means to control the temperature in the combustion chamber (reactor) and with oxygen controller to control or adjust the amount of oxygen discharged thru the stack (waste gas outlet).

Response to Arguments

Claims 1-14 are cancelled; thus, applicants' arguments with respect to claims 1-14 are moot. Newly added claims 15-19 necessitate new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1764

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tom P Duong whose telephone number is (571) 272-2794. The examiner can normally be reached on 8:00AM - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 1764

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
